OMNI
SOLUTIONS
GLOBAL LEADER IN UV TECHNOLOGY

OMNISHield is a patented, revolutionary antimicrobial solution that creates a microscopic shield on porous and non-porous surfaces to destroy bacteria on contact and continuously for up to 90 days after cleaning. **OMNISHield** is water-based, nontoxic to humans and animals, contains no harmful chemicals or heavy metals, safe for food contact surfaces, and is bound to the surface meaning it cannot leach into the surrounding environment. Protection begins in 60 seconds and remains **effective for up to 90 days on high touch areas**.

When applied to a surface or incorporated into a material, **OMNISHield** forms a covalent bond with a substrate and creates a microbiostatic antimicrobial coating. The coating forms a nano-bed shield of spikes each of which carry a positive charge that attracts the negatively charged bacteria. Once attached, the molecular spikes pierce the cell and rupture its membrane, causing the bacterial microorganism to die.

Anton & Michel cares about your health and safety, all areas have been treated with **OMNISHield**. Please enjoy your **experience**, confident that we are implementing the best technology available for our guests- **OMNISHield!**
